SYSTEM OVERVIEW

This database is an **IT Helpdesk Ticketing System** that:

- Records of user issues
- Assigns technicians automatically
- Tracks progress and SLA
- Archives old resolved tickets

TABLES

1. **Users**

- Stores employees who report issues
  → Each user can create many tickets

---

2. **Technicians**

- Stores IT staff
  → Technicians are assigned to tickets

---

3. **Assets**

- Stores computers (PCs) using asset codes like **CL-101**
  → Each asset can be linked to a ticket

---

4. **tickets (MAIN TABLE)**

- Stores all reported issues
  Includes:

- **Who** reported it (user_id)
- **Which** PC (asset_id)
- **Status** (Open, Resolved, etc.)
- Priority and SLA
  👉 This is the **core of the system**

---

5. **Assignments**

- Links tickets to technicians
  → One ticket = one assigned technician (auto-assigned)

---

6. **ticket_logs**

- Stores history of actions (created, resolved, assigned)
  → Used for tracking and auditing

---

7. **archived_tickets**

- Stores old resolved tickets after 7 days
  → Keeps system fast while preserving history

RELATIONSHIPS (HOW TABLES CONNECT)

- users → tickets
  One user can create many tickets
- assets → tickets
  One PC can have many tickets
- tickets → assignments → technicians
  Tickets are assigned to technicians
- tickets → ticket_logs
  Each ticket has multiple logs
- tickets → archived_tickets
  Old tickets are moved here after 7 days

HOW DATA FLOWS (SYSTEM PROCESS)

1. User submits ticket (using email + asset code)
2. System creates a record in tickets
3. SLA deadline is automatically set (48 hours)
4. System auto-assigns a technician
5. Actions are recorded in ticket_logs
6. Technician resolves the ticket
7. After 7 days → ticket is moved to archived_tickets

KEY FEATURES

- ✅ Smart ticket creation (no IDs needed)
- ✅ Automatic technician assignment
- ✅ SLA tracking (48-hour rule)
- ✅ Logging system for history
- ✅ Archiving system for old data

SIMPLE SUMMARY

"The system manages IT support requests by storing tickets, linking them to users and assets, automatically assigning technicians, tracking progress through logs, and archiving resolved tickets after a retention period."

SUMMARY

"It's a database that tracks IT issues, assigns technicians automatically, monitors resolution, and archives old tickets."
